

ANKIT SINGH

Linux Administrator | System Administrator

Hyderabad • ankit.visen@gmail.com • +91-8686773344 • [linkedin.com/in/ankit-visen/](https://www.linkedin.com/in/ankit-visen/)

PROFESSIONAL SUMMARY

Linux Administrator with over 4 years of experience managing enterprise Linux infrastructure, Windows servers, network administration, and IT operations. Experienced in administering Red Hat Enterprise Linux (RHEL), Rocky Linux, Ubuntu, server installation, configuration, patch management, user administration, and system troubleshooting. Hands-on expertise in Linux administration, Ansible automation, Bash/Python scripting, Apache, Nginx, DNS, DHCP, LDAP, TCP/IP, VLANs, SSL/TLS certificate management, and centralized logging using Rsyslog. Skilled in infrastructure monitoring with Prometheus, Grafana, Nagios, Zabbix, Kibana, and LibreNMS. Strong understanding of Linux security, system hardening, log analysis, and enterprise infrastructure operations, with a passion for implementing security best practices and continuously expanding expertise in cybersecurity.

CERTIFICATIONS

- Masters in network Administration (JK-MNA) – 08/2022

CORE TECHNICAL SKILLS

- **Operating Systems:** RHEL, Rocky Linux, Ubuntu, CentOS, Windows OS
- **Networking:** TCP/IP, DNS, DHCP, VLAN, Routing, Switching, NAT, Firewall, LDAP
- **Linux Administration:** Installation, Configuration, User & Group Management, Package Management, Patch Management, SSH, Systemd, Cron, Log Management, Performance Monitoring, SSL/TLS
- **Web & Database:** Apache, Nginx, MySQL, PostgreSQL
- **Monitoring:** Nagios, LibreNMS, Zabbix, Prometheus, Grafana, Kibana, ELK, Rsyslog
- **Automation:** Ansible, Bash, Python, Git
- **Tool & ITSM:** Redmine, Confluence, Microsoft Office, Documentation & Reporting, Inventory Management, ITIL Process Knowledge

PROFESSIONAL EXPERIENCE

1. IIIT HYDERABAD (Linux & Network Engineer) - Hyderabad

July 2023 – May 2026

- Administered enterprise Linux (RHEL, Rocky Linux, Ubuntu) and Windows OS, ensuring system availability, performance, and security.
- Installed, configured, upgraded, patched, and maintained Linux and Windows operating systems in production environments.
- Automated server configuration, software deployment, and patch management using Ansible, improving operational efficiency and configuration consistency.
- Performed Linux system administration tasks including user and group management, package management, service management (systemd), log analysis, and performance monitoring.
- Installed, configured, monitored, and troubleshot enterprise network infrastructure including Cisco, HP, Aruba, Brocade, and Netgear switches.
- Managed Apache and Nginx web servers and performed SSL/TLS certificate installation, renewal, validation, and troubleshooting, ensuring certificate integrity and secure HTTPS connectivity.
- Designed and implemented centralized logging using Rsyslog for Linux servers, proxy servers, firewalls, routers, and network devices, enhancing infrastructure visibility, security monitoring, log analysis, and incident investigation.

- Monitored enterprise infrastructure using Prometheus, Grafana, Nagios, Zabbix, and Kibana, proactively identifying and resolving performance issues.
- Managed IT service requests and incident tickets using Redmine, while participating in major incident resolution and root cause analysis.
- Created operational documentation and technical runbooks in Confluence, improving knowledge sharing and support efficiency.
- Followed Linux security best practices including system patching, access management, secure configurations, and routine system health checks.
- Installed, configured, and maintained an Oxidized server for automated backup and version control of enterprise network device configurations.

2. Cache Peripherals PVT LTD – (System & Network Engineer) - Client Location: IIIT Hyderabad *May 2022 - May 2023*

- Installed, configured, and maintained Linux and Windows operating systems across enterprise environments.
- Diagnosed and resolved hardware, software, operating system, and network-related issues while ensuring minimal downtime.
- Performed preventive maintenance, system monitoring, software installations, and security patching to maintain system reliability.
- Assisted in troubleshooting LAN connectivity, DNS, DHCP, IP addressing, and switch-related issues.
- Followed IT support procedures for incident management, escalation, and documentation while meeting SLA requirements.

PROJECTS

- **Oxidized Configuration Backup Server**

- 1) Designed, built, and deployed an Oxidized server from scratch on Linux for automated backup and version control of enterprise network device configurations.
- 2) Integrated enterprise network devices including Cisco, HP, Aruba, Brocade, and Netgear switches for scheduled configuration backups.
- 3) Improved configuration management, auditability, and disaster recovery by maintaining version-controlled device configurations.

Technologies: Linux | Oxidized | LibreNMS | Git | SSH

- **Centralized Logging using Rsyslog**

- 1) Designed, implemented, and managed a centralized Rsyslog server for collecting logs from Linux servers, proxy servers, firewalls, routers, and enterprise network switches.
- 2) Configured remote log forwarding, log rotation, and secure log storage.
- 3) Integrated log data with Grafana/Kibana dashboards for infrastructure monitoring and troubleshooting.
- 4) Improved incident investigation through centralized log visibility.

Technologies: Linux | Rsyslog | SSH

- **Linux Server Automation using Ansible**

- 1) Developed Ansible playbooks for automated server provisioning, package installation, patch management, and configuration management.
- 2) Managed inventory groups and reusable roles for enterprise Linux environments.
- 3) Automated routine administrative tasks, reducing manual effort and ensuring configuration consistency.

Technologies: Linux | Ansible | SSH

- **Accounts Portal for VPN & Wi-Fi User Provisioning**

- 1) Designed and deployed a secure **Django-based Accounts Portal** from scratch for external VPN and Wi-Fi account provisioning.
- 2) Implemented **LDAP integration**, role-based access control (RBAC), secure authentication, user lifecycle management, and audit logging.
- 3) Developed administrative workflows for user creation, account management, and secure access provisioning while following security best practices.

Technologies: Linux | Python | Django | PostgreSQL | LDAP | Bootstrap | Nginx | Gunicorn/uWSGI

EDUCATION

PGDCA

Makhanlal Chaturvedi National University of Journalism and Communications – **Bhopal**

May 2021 – May 2022

79%

MASTERS IN NETWORK ADMINISTRATION (CERTIFICATION COURSE)

Jetking Info train Limited - **Hyderabad**

March 2021 – Aug 2022

Grade B

BCOM Hons.

Bhavans Vivekananda Degree College – **Hyderabad**

May 2017 - May 2020
